

Arlington Tree Canopy Equity Program Species – Spring 2024

Overview

- All of these species do well in our area, generally accepting of our clay soils. The few that do not do well in clay are mentioned.
- Trees are generally 2-inch caliper, 7-feet high at planting.
- The tree growth rate is given for height: Slow= 12"/year Medium=18"/year Fast = 24"/year
- Shrubs are generally 2-feet high at planting.
- Shrubs will form thickets. Prune as needed to maintain size.

Common Name	Genus Species	Mature Height (ft.)	Mature Width (ft.)	Sunlight Requirements	Species Description				
Section I - Large Shade Trees: may have width greater than 40 feet									
American beech	Fagus grandifolia	50-70	50-70	Full sun to partial shade	Wide-spreading branches. Less tolerant of dry soil; has shallow roots. Nuts attract wildlife. Doesn't tolerate compacted, wet or poorly drained soils. Slow to medium growth rate.				
American sycamore	Platanus occidentalis	70-100	70-90	Full sun	Interesting, multicolored bark; moderate wildlife value. An adaptable, tough tree. Medium-fast growth rate.				
Red oak	Quercus rubra	60-75	60-75	Full sun to partial shade	High wildlife value, medium to fast growth rate. Prefers loamy soil, tolerates clay but not very wet soil. Better at tolerating urban conditions. Usually deep red fall color.				
Scarlet oak	Quercus coccinea	70-75	40-50	Full sun	Striking fall color, high wildlife value, medium-fast growth rate. Glossy dark green leaves. Less tolerant of adverse soil conditions.				
Swamp white oak	Quercus bicolor	60-80	50-75	Full sun to partial shade	Leaves dark, shiny green above and silvery white beneath; good fall color. High wildlife value. Tolerates flooding, drought, and a range of soils. Slow-medium growth rate.				
Sweetgum	Liquidambar Styraciflua	60-75	40-50	Full sun to partial shade	Striking fall color, corky ridges on branches, spiky gumballs in fall and winter, moderate wildlife value, growth rate is medium-fast. Bright green star shaped leaves.				
White oak	Quercus alba	50-80	50-80	Full sun	High wildlife value, slow to medium growth rate. Leaves blueish-green in summer. Does NOT tolerate soil compaction or disturbance of its root zone, nor very wet soil.				
Willow oak	Quercus phellos	40-60	40-60	Full sun	Moderate wildlife value, medium to fast growth rate. More tolerant of adverse soil conditions, including very wet.				

	Sectio	n II - Med	lium Shac	de Trees: trees	with less than 40 feet width
Bald cypress	Taxodium distichum	50-100	20-35	Full sun to partial shade	Tolerant wet soils, Stately with pale green foliage turning golden and purple in fall, small 1" cones.
Black gum	Nyssa sylvatica	30-50	20-30	Full sun to partial shade	Leaves lustrous dark green summer, striking fall color, high wildlife value, slow to medium growth, tolerates many soils (loam, clay, sandy, acidic, wet to well-drained).
Eastern hophornbeam	Ostrya virginiana	25-40	20-30	Sun to light shade	Hop-shaped flowers, slow growth, attractive exfoliating bark, moderate wildlife value, tolerates occasional dry soil.
			!	•	trees less than 35 feet tall
Sweetbay magnolia	Magnolia virginiana	20-35	20-35	Partial shade, Do not plant in full shade	Semi-evergreen with fragrant white flowers, tolerates some flooding and salt. Medium to fast growth rate.
			9	Section IV – Sh	rubs
Buttonbush	Cephalanthu s occidentalis	6-12	Variable	Full sun to shade	Tolerates drought, slender deciduous tree, easy to grow and succeeds in most soils, although it thrives in any good loam. Prefers a partial to deep shade, slow-medium growth rate.
Common elderberry	Sambucus Canadensis	2-8	Variable	Full sun to shade	Tolerates dry to wet soils, white flowers in summer, purple berries in fall can be made into preserves or wine, prefers two for better fruiting.
Oakleaf hydrangea	Hydrangea quercifolia	3-6	Variable	Full sun to partial shade	Prefers moist rich soil, white blooms late spring, leaves purple in fall. Deer love to eat this plant.
Red osier dogwood	Cornus servicea	6-9	Variable	Partial shade	Prefers moist rich soil, white blooms early, winter has spectacular red stems after leaves fall.
	llex			Full sun to	Prefers medium moisture, greenish white in spring. Highlight is red berries that remain after leaves fall. Stunning winter specimen. Need more than one for more

Right Tree, Right Place, Right at Home!

Winterberry

verticillata

• Plant trees at least 20 feet away from any overhead electric utility lines. This is the horizontal distance from the tree trunk to the wire or utility pole.

berries.

- Plant at least 10 feet from a building.
- Plant at least 10 feet from existing small trees and 20 feet from existing large trees.

6-12 Variable shade

- Plant trees at least 4 feet from sidewalks, driveways, patios and fences. Planting distances may also be affected by site conditions or the species.
- Plant trees at least 5 feet away from any known underground utility lines (water, gas, electric or sewer lines for example). If approved for a tree, Miss Utility will be called to check the planting location for distance to underground utilities.
- To lower your cooling costs, shade your home by planting canopy trees on the southwestern and western sides.
